## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art shown in figure 1 (AAPA, hereinafter) in view of Wölfges [DE 19907732].

AAPA discloses a solenoid [100] having a cylindrical excitation coil [104] and a plunger [102] movable within the excitation coil, the solenoid being adapted to generate a magnetic force to move the plunger when an electric current is applied to the excitation coil, wherein a side of the plunger compartment accommodating the plunger and fluid is closed as a cover [106] formed of a magnetic material and a cylindrical projection [107] projecting from the cover portion in such a manner as to surround a part of an outer periphery of the plunger and the cover being provided with a through hole extending therethrough.

AAPA disclose the instant claimed invention except for the cover including a pair of throughholes extending through from an upper portion to a bottom portion thereof.

Wölfges discloses a solenoid [figure 1] having a plunger [30] mounted within a housing including a pair of throughholes on upper and lower portions thereof.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the throughhole design of Wölfiges in AAPA in order to provide displacement venting for the air within the plunger cavity.

AAPA, as modified, discloses the claimed invention except for the throughholes being mounted on the cover instead of the plunger. It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the throughholes in the cover instead of the plunger, since it has been held that a mere reversal of the essential working parts of a device involves only routine skill in the art. In re Einstein, 8 USPQ 167.
